

Rack Inspection & Repair

WAREHOUSES CAN BE A DANGEROUS PLACE TO WORK

Repairing damaged racking is essential to ensure the safety of warehouse personnel, protection of inventory, and maintaining efficient operations. Being proactive can help rectify potential issues before they lead to collapse.

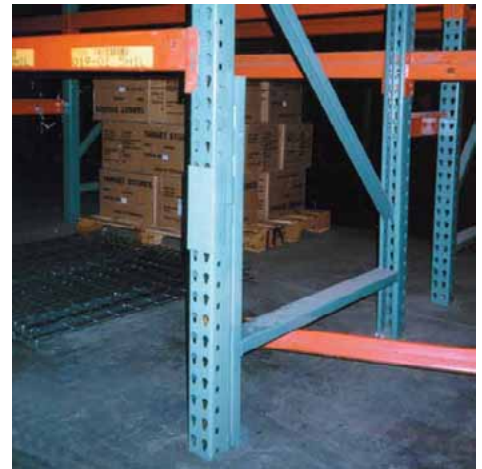

The above incident could have been avoided!

Failure to address damaged or missing pallet rack components can weaken rack integrity and ultimately end in disaster. To ensure your rack is up to strict health and safety standards, we recommend having regular assessments conducted by trained and qualified rack experts who will help you identify damaged rack as well as possible causes of damage.

Repair Your Damaged Rack Today

- + Rack Repair is a cost-effective, on-site option that can enhance rack system longevity and safety.
